

Sidor Sidorov

Software Engineer

Summary

- Strong Java developer with 7+ years of experience in software development
- Experience of development full-stack web-applications in Java / JavaScript
- Experience of setting up development infrastructure

Technical skills

- Programming Languages: Java 8, JavaScript, TypeScript, Haskell
- Java frameworks: Spring (Core, Boot, REST, Security, MVC), Hibernate, JPA, GXT, JAX-RS, JAX-WS, JSF, JSP, PrimeFaces, Swing
- UI frameworks: AngularJS, Bootstrap, Browserify, JQuery, Jasmine
- Testing frameworks/tools: JUnit, Selenium, Mockito, PowerMock, Karma, Apache EasyMock, JMeter
- Databases: Oracle DB, MySql, PostgreSQL, MongoDB
- Virtualization Tools: VMware ESXi, Google iCloud, AWS(EC2)
- Building Tools: Gradle, Maven
- Logging systems: Sumo Logic
- IDE: IntelliJ IDEA, Eclipse IDE, NetBeans IDE
- Software Development Methodologies: Scrum, BDD, Acceptance Test-Driven Development

Education and Certificates

- *Novovoronezh Polytechnic College. Computers and automation systems software. Technician*
- *Voronezh State Technical University. Computing machines, complexes, system and networks engineer*

Experience

09/2018 - 12/2018, Senior Java Developer, EPAM at LendingTree

Project: Web application for broker company which connects consumers with multiple lenders, banks, and credit partners who compete for business. The application represented a front-office website with a questionnaire forms used by people who are looking to refinance their loan. The application was designed as a set of micro services integrated with 3d-party systems.

Responsibilities:

- Requirements analysis
- Requirements implementation
- Existing code improvement
- Bug fixing
- Code refactoring

- Required test environment configuration

Achievements:

- Improved stability of existing code by refactoring
- Implemented the module responsible for obtaining information about credit scores of the clients
- Modified and redone module responsible for saving information about client's requests into SAP db

Technologies: Java 8, MongoDB, Maven, Tomcat , GIT, Java 8, Servlets, Kafka

04/2018 - 08/2018, Senior Java Developer, EPAM at CoreLogic

Project: Web-application for real estate insurance agency in financial sector. The application represented a back-office used by insurance agents for evaluations of risks in the area where the evaluated property is located. The application was designed as a set of micro services integrated with 3d-party systems.

Responsibilities:

- Requirements analysis and implementation
- Development of both Front-end and Back-end functionality
- Implementation of connectors to 3d party services based on provided API
- Code maintenance and refactoring
- Development of unit & integration tests
- Bug fixing

Achievements:

- Introduced new features into application
- Improved stability

Technologies: PostgreSQL, Gradle, GIT, Jenkins, Pivotal Tracker, Java 8, Angular 5, Hibernate, Spring Boot, Spring MVC, Spring Security, Junit, Mockito, Jasmine, Microservices

07/2017 - 12/2017, Senior Java Developer, AristonTek at Vanguard

Project: Web-application for investment advisor company. The application represented a front-office dynamic website used by investors for managing their investments. The application was designed as a set of micro services integrated with 3d-party systems.

Responsibilities:

- Deep requirements analysis
- Reimplementation
- Bug fixing
- Code maintenance and refactoring
- Writing tests for implementation

Achievements:

- Improved stability.

Technologies: Maven, GIT, Bamboo, Jira, Java 6, SOPA, Spring, Spring MVC, Angular JS, JSP, JSF, Tomcat

07/2016 - 01/2017, Senior Java Developer, WebDom

Project: Web-application for government institutes. The application represented a back-office used by government institutions (like public schools, public kindergartens) to report budget spendings and further control and validation by other organizations. Input of report information is implemented through a set of web-forms and pages in order to provide a convenient workflow for composition of reports with validation.

Responsibilities:

- Requirements analysis
- New web pages with new forms implementation
- Code maintenance and refactoring
- Bug fixing
- Production support

Achievements:

- Introduced new features and forms into application.
- Improved stability.

Technologies: PostgreSQL, GIT, TeamCity, Jira, Maven, Java 6, JDBC, JSF, JQuery, Tomcat

06/2014 - 06/2016, Senior Java Developer, MuranoSoftware at DMVDesk

Project: Web-application for Motor Vehicle Software Corporation. The application represented a back-office used by dealers and big companies with big leased vehicles park for improvement vehicles registration experience.

Responsibilities:

- Test and UAT environments setup and configuration
- Requirements analysis and implementation
- Existing code improvement
- Bug fixing
- Code maintenance and refactoring
- Writing tests for implementation

Achievements:

- Introduced new features into application
- Configured zabbix on production environment
- Configured load balancer for tomcat in production, with apache web server as a balancer
- Made a bash script which helped developers to get email notifications when branches they were working on were not able to be merged with dev without conflicts, which let them to timely fix conflicts

Technologies: PostgreSQL, Eclipse, GIT, TeamCity, Jira, Maven, Java 6, JDBC, JSF, JQuery, Tomcat, AWS(EC2)

10/2013 - 04/2014, Senior Java Developer, Luxoft at Deutsche bank

Project: Web-application for bank. The application represented a back-office used by bank special service to monitor financial transactions and provide information about the status of transactions that clients have questions about. Purpose of project was to reimplement old java ee 1.3, JSF application with Spring and GWT into single page application.

Responsibilities:

- Requirements analysis and implementation
- Bug fixing
- Code maintenance and refactoring
- Writing tests for implementation

Achievements:

- Improved stability

Technologies: Oracle, SVN, Jenkins, Java 6, GWT, JDBC, Tomcat

12/2012 - 08/2013, Senior Java Developer, Agilium Labs

Project: CRM system for Software consultancy company. The application represented a front-office and back-office used by the clients of consultancy to manage their projects and by consultancy company itself for communication and resources management. The application was designed as a stand alone single page application.

Responsibilities:

- Application architecture
- Requirements analysis and implementation
- Bug fixing
- Developing of company origin skins for GWT components

Achievements:

- Designed two applications.

Technologies: PostgreSQL, Oracle, Maven, Git, Jenkins, Java 6, hibernate, JSF, GWT, Spring, Tomcat

07/2012 - 01/2013, Java Developer, Nokia Siemens Network

Project: CRM application for mobile tower service department of NokiaSiemensNetwork. The application represented a back-office used by responsible technicians to monitor hardware on mobile towers and schedule respective repair actions. The application was designed as a stand alone single page application.

Responsibilities:

- Requirements analysis and implementation
- Bug fixing

Achievements:

- Implementation and architecture of new application

Technologies: Oracle,JBoss Application server, mercurial, Java 6, Hibernate, JSF

03/2012 - 07/2012, Java Developer, 36'6

Project: Swing Desktop application for big pharmacy chain. The application represented a front-office used by cashiers in retail to sell medical drugs to the pharmacy clients.

Responsibilities:

- Requirements analysis and implementation
- Bug fixing

Achievements:

- Introduced part controls on the main view of the application and other views. Introduced stock view of the application. Implemented logical functionality

Technologies: PostgreSQL, Hibernate, Swing, Java 6, Hibernate

07/2011 - 01/2012, Junior Java Developer, Open technologies Oil

Project: Swing desktop application for software consultancy which is the partner of Oil companies. The application represented a back-office used by clerks to enter information from paper documents into the database.

Responsibilities:

- Requirements analysis and implementation
- Visual forms implementation

Achievements:

- Introduced new forms and functionality into application under supervision

Technologies: Oracle, ant, SVN, Java 6, SQL, Swing

08/2006 - 07/2011, System Administrator, Several different organizations

Set up and support of the organization's servers, users computers and users.

Responsibilities:

- Set up, configuration and support of mail/domain/firewall servers
- Set up, configuration and support of users computers
- Users support
- Local area network support

Technologies: MSSQL, Windows Server 2003, Citrix, Linux, Firewalls, TCP/IP, Computers
